Database architecture

Gleb Bikushev

1.The database of **PostgreSQL** was used to store the data.

2.Data was scrapped and loaded to database from:

1) https://www.italki.com/en/teachers/english
2) https://www.italki.com/en/teachers/spanish
3) https://www.italki.com/en/teachers/russian
4) https://www.italki.com/en/teachers/japanese
5) https://www.italki.com/en/teachers/italian

3. Script for scrapping, preparing, tidying and loading the data into PostgreSQL database: data_load.py

4.ER-diagram:
